

HoloVis delivers display technology, Jupiter CMS & MediaStar Video over IP for the Liverpool Arena & Convention Centre

HoloVis, through their partnership with Liverpool Direct Ltd & BT, won the contract to design, install and support all of the digital signage, projection display solutions and delivery mechanisms for the new Arena & Convention Centre in Liverpool.

Over 120 LCD screens were installed throughout the new facility including a wide range of meeting room projection solutions and high-end projectors for three large-format auditoriums and the main theatre/stage venue.

For the generic digital signage, content management and scheduling solution, HoloVis implemented their Jupiter Digital Signage software to allow for simple and effective control of media, ticker messages and content to all of the displays. HoloVis also supplied and installed the media & TV distribution system for the entire facility using MediaStar video over LAN encoder/decoder technology.
